

$n \Rightarrow$

Good boy/girl DP strategy

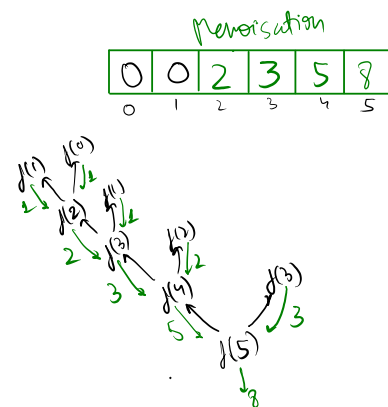

① Memo / Recur

① Start loop from base cases

② Conversion return \rightarrow continue

\hookrightarrow if return is having a value
save that to DP array
and then continue.

③ At the place of recursion calls
access dp array

* Base case
* Do i have it already?
[recur
* before returning the res,
* remember it
* return

Tabulation

1	1	2	3	5	8
0	1	2	3	4	5
